Eval-FB2M5LVR

Ethernet LC Evaluation Kit User Guide

Firecomms[®]

OVERVIEW

The Eval-FB2M5LVR evaluation kit enables evaluation of the Firecomms LC transceiver for plastic optic fibre (POF) and large core glass fibre (200, 400 um PCS). The kit includes a single LC transceiver pre-mounted onto a simple PCB that allows easy application of DC power via standard 2 mm diameter DC jacks. Data inputs (TD+/-) and data outputs (RD+/-) are connected via standard screw terminal SMA connectors. A single loop-back POF cable with LC plug is also included.

For particular POF or PCS lengths and assemblies please contact Firecomms Applications support directly.

EVALUATION KIT CONTENTS

The Evaluation Kit contains the following:

- 1. Evaluation PCB
- FB2M5LVR mounted onto the evaluation PCB
- 3. POF cable with loop back LC plug (1 m, 0.5 NA, 2.2 mm jacket simplex POF)
- 4. FB2M5LVR Datasheet

INITIAL SETUP

- 1. Connect GND of a DC power supply to the ground points of the PCB (black terminals).
- 2. Connect 3.3 V to each of the Tx and Rx VCC jacks (red terminals).
- 3. To monitor the signal detect function, connect an oscilloscope probe (1 $M\Omega$) to the SD test point.
- 4. Connect suitable pattern generator differential data signals via SMA cables to the TD +/- data pins.
- 5. Connect the RD +/- data pins to a suitable high-speed oscilloscope using 50 Ω termination and high-speed coax, SMA terminated cables.
- 6. For a loop-back cable test, connect the provided LC loop-back cable assembly into the LC connector. This connects the Tx back to the Rx over 1m of Step-Index POF.
